## E-MAIL CONTINGENCY AND RECOVERY SERVICE (ECRS)

Omniquad ECRS is an e-mail contingency solution that works in conjunction with your Mailwall Remote subscription. As the Mailwall Remote server arrays screen your incoming mail for spam and viruses, a separate, secure backup of all legitimate mail is made at the same time.

In the event of your mail server failure, your users simply log on via web interface to ECRS interface, retrieve their e-mail and continue working as normal. ECRS provides instant availability of all legitimate e-mail that was already delivered to your mail server in the hours prior to the server downtime as well as during the server downtime (the service will also store recent mail up to 30 days).

Switching to using the ECRS interface does not require any activation-users have access to the recovery mail interface 24/7. The availability of ECRS can be compared to running a mirror offsite mail server with web account access, replicating your incoming and outgoing mail in real time.

### Key Benefits

- Always on - users simply log on to their individual accounts to get access to mail
- Instant access to mail that was already delivered
- Instant access to messages queued for delivery while your mail server is still down
- Requires no software or dedicated hardware
- No setup required
- Zero maintenance
- No impact on message delivery speed
- No bandwidth overhead

ECRS - Internet Explorer provided by Dell
